The Team

Organisational “Buy - In”

Aim: To have above 80% of cervical screening of total enrolled population.

Buy-in

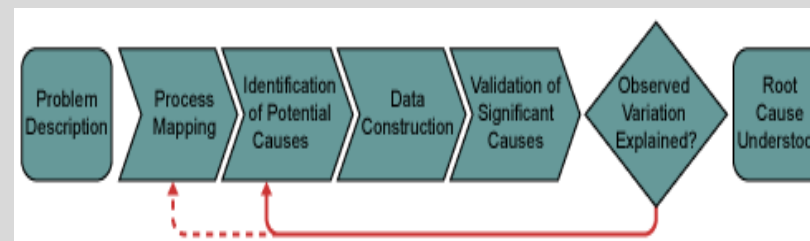

The only screening that we were not achieving good results was cervical screening so in the staff meeting it was decided that as the present recall system was not working. All staff were going to work as a team to try to achieve better results. Any staff who saw a patient eligible to have smear would encourage them, but in a non invasive discreet friendly manner. We would try to establish what were the barriers and endeavour to help in any way we could.

Change Ideas

Driver Diagram Teamwork and Creativity Help to Identify Root Causes

Creativity and team management tools, often employed in solution finding, can also generate deep understanding of the process mechanics and help the team prepare for the distilling and data-based validation of the root causes of a problem.(why women were not coming for smears)

Figure 1: Process of Root Cause Analysis

What Changes have you tested?

	Change Tested	Outcome
1	Txt recalls Letters to remind about smears due.	Minimal response
2	Phone calls with explanation why smears are important	Better response
3	Preparing clients for smear as a team during nurse triage and Doctor consultant /identifying their fears and offering support	Best response / high success rate

Most Successful PDSA Cycles?

Plan —We decided that we would work as a team (reception/nurse/Doctor / student /house officer)

And each member would try different methods and see which method worked best

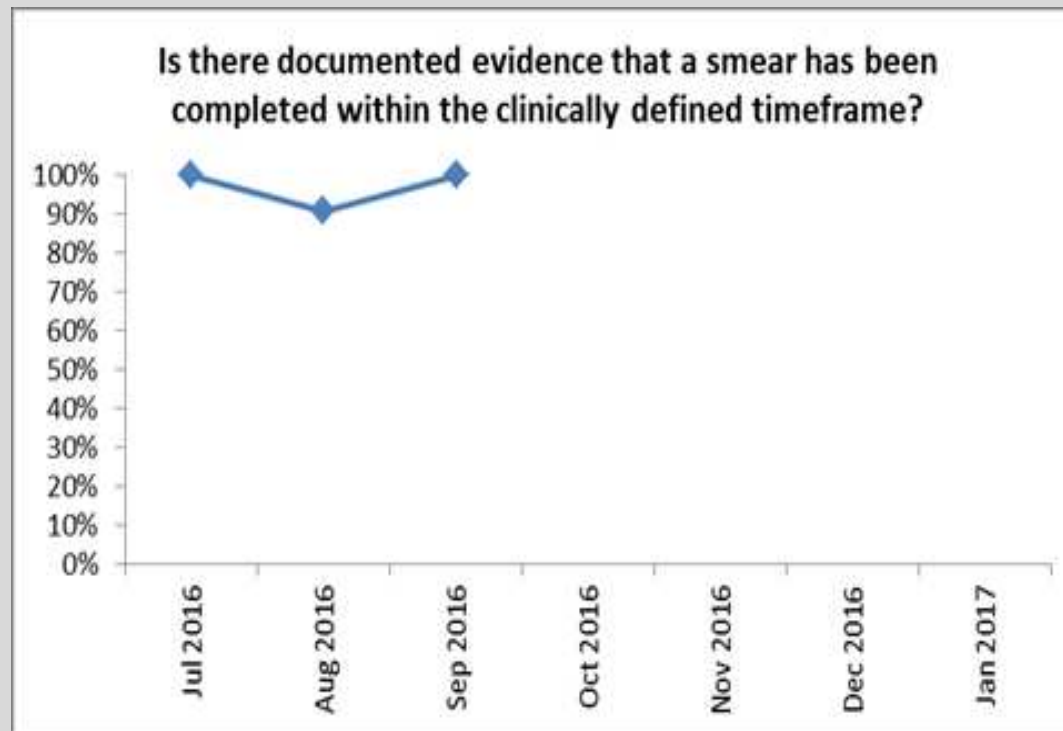

DO All the eligible data for women who required smear was download from pms – all no (responders were reactivated and each person interviewed for reasons why they refused smear /no longer required / not sexually active etc . All methods of recall system trialed from traditional recall to phone calls as well as nurse triage with opportunistic smears . Active promotion by GP/reception / and medical students .

Study All methods of recall systems were audited to see which method worked best
It was found there were different reasons for different age groups from bad personal experience (pain) shame / fear / cost /sexually inactive / hysterectomy / no-time

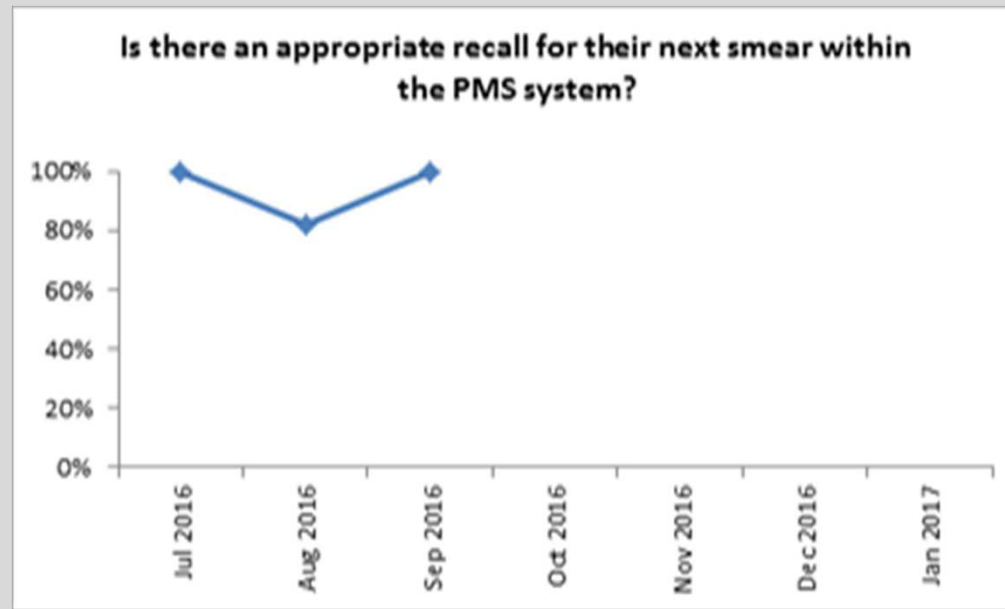

ACT It was decided that if any eligible woman had not responded with three recalls a senior nurse /Doctor would have a phone or face to face consult to establish why she was not responding.

Measures Summary

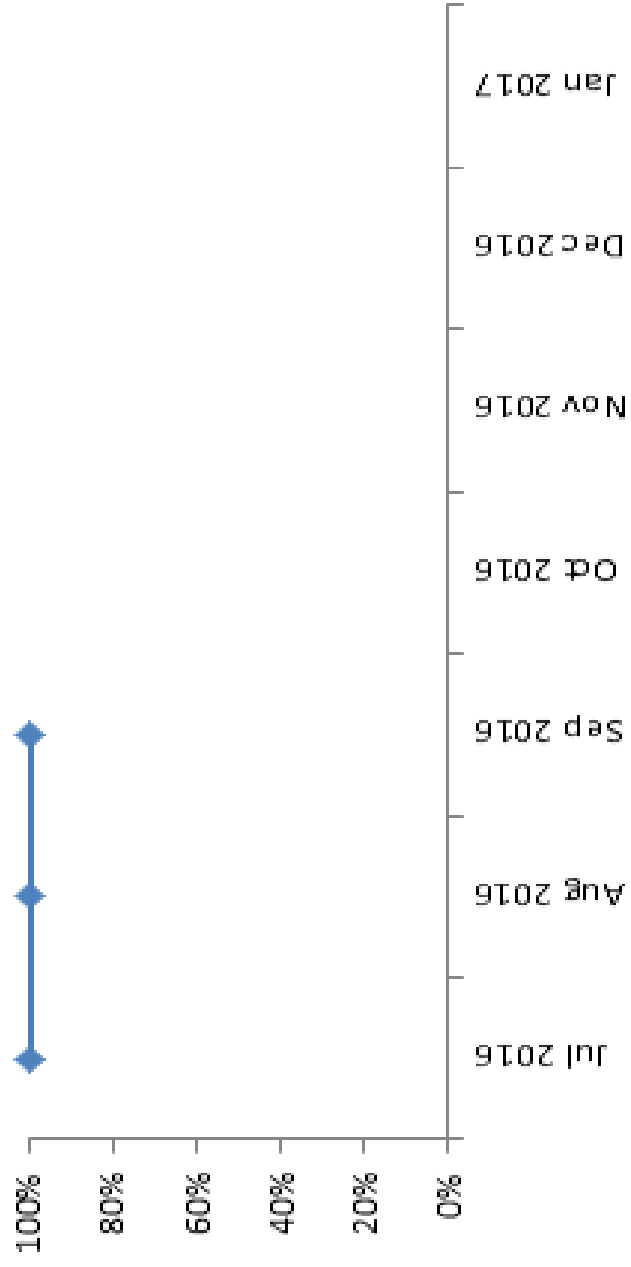

Briefly describe what you are measuring and how and why? Include Dashboard

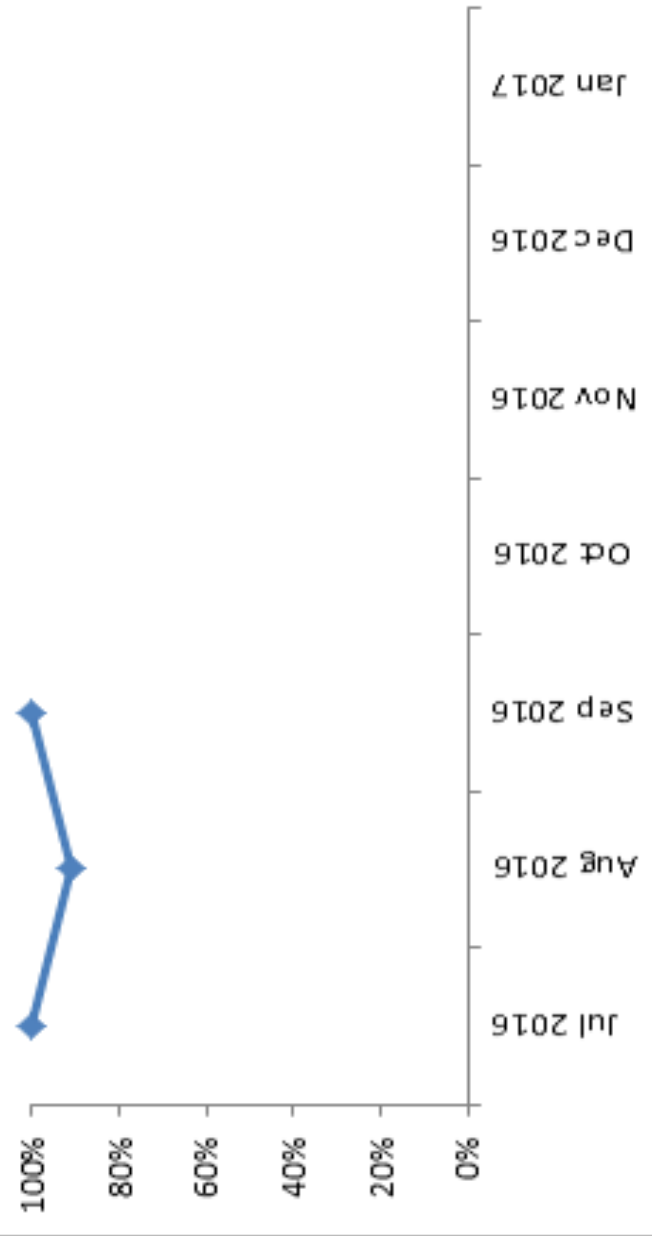

Continued

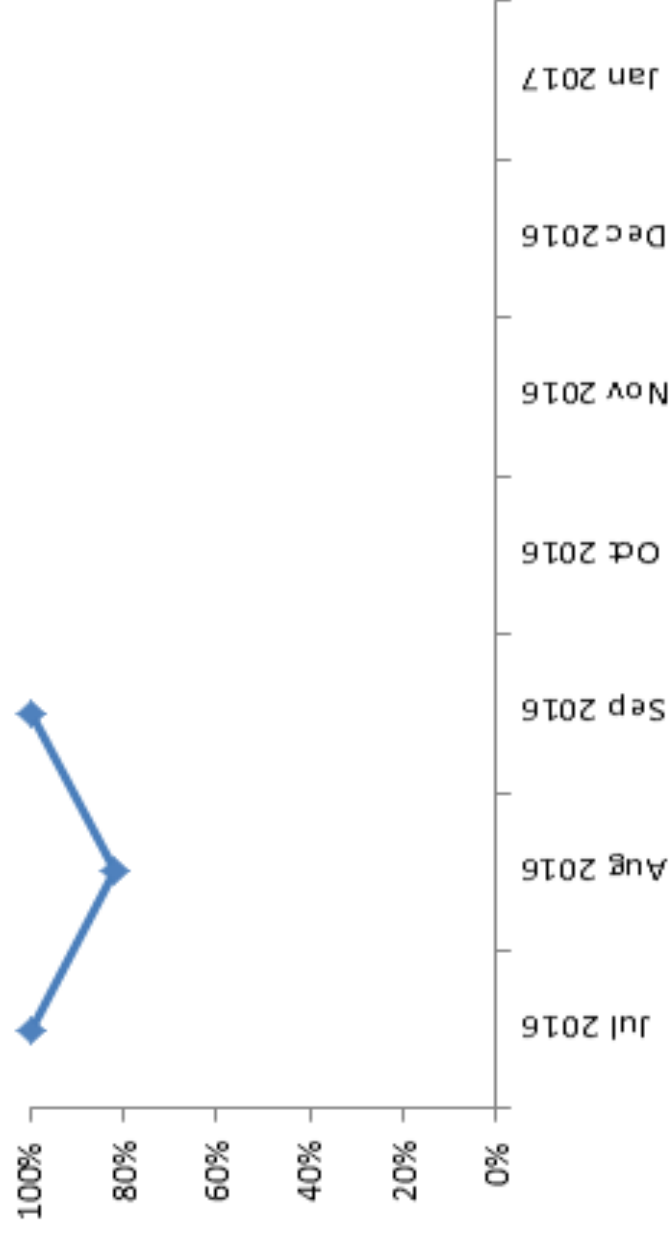

A clear clinical reason why a smear is not required documented (if applicable).

Is there documented evidence that the last smear result was conveyed to the patient with a clear follow up plan?

Cervical Smears Overall Compliance

Highlights and Lowlights

- Highlights - when our numbers started to increase and it was great to see that doctors and nurses were all on the same page
- Another highlight was when phone calls carried out by our medical student increased the smear rate
- Lowlight – time consuming in trying to break the barriers that prevented the clients from having a cervical smear/ Free smears not covered for out of manukau area patients

Achievements to date

Do you have an

-agreed aim – Our aim is to have 80% and above for cervical smear screening rates

-a change package- Patients who enrolled from another practice would have their smears updated asap or offered an opportunistic smear as soon as there are willing. Anyone triaging are encouraged to give holistic care –i.e offer mam, tetnus /smear check- last blood test etc

-measurement plan- PMS audit system DrINFO /PHO report

Do people on your team know what their responsibilities are and what is expected of them? Yes we have regular in-house meeting and all members are keen.

What has changed and what difference have the changes made?

Working as a team makes everyone feel valued it has increased patient satisfaction as well.

Any other achievements?

“My greatest achievement was “when I convinced a 63year old Maori woman who had never had a smear in her life to have a smear, she had declined smears at every recall” listening to her reasons humbled me and gave me an insight to the sufferings some women have gone through . My lesson learnt “Never judge any non responders again again” Rekha singh Nurse

Doctors working in partnership with nurses have had greater success

‘Giving a script for ovestin cream for postmenopausal women pre smear gives better success rate” Dr Kulvant

“Being able to visualise the cervix is an achievement for me “ Dr kate Helingoe House Officer on attachment in community

“Educating about the importance of regular smears which motivates them to come back “ Venet Nurse

- Highlights - when our numbers started to increase and it was great to see that doctors and nurses were all on the same page
- Another highlight was when phone calls carried out by our medical student increased the smear rate
- Lowlight – time consuming in trying to break the barriers that prevented the clients from having a cervical smear/ Free smears not covered for out of manukau area patients

Achievements to date

Do you have an

-agreed aim – Our aim is to have 80% and above for cervical smear screening rates

-a change package- Patients who enrolled from another practice would have their smears updated asap or offered an opportunistic smear as soon as there are willing. Anyone triaging are encouraged to give holistic care –i.e offer mam, tetnus /smear check- last blood test etc

-measurement plan- PMS audit system DrINFO /PHO report

Do people on your team know what their responsibilities are and what is expected of them? Yes we have regular in-house meeting and all members are keen.

What has changed and what difference have the changes made?

Working as a team makes everyone feel valued it has increased patient satisfaction as well.

Any other achievements?

“My greatest achievement was “when I convinced a 63year old Maori woman who had never had a smear in her life to have a smear, she had declined smears at every recall” listening to her reasons humbled me and gave me an insight to the sufferings some women have gone through . My lesson learnt “Never judge any non responders again again” Rekha singh Nurse

Doctors working in partnership with nurses have had greater success

‘Giving a script for ovestin cream for postmenopausal women pre smear gives better success rate” Dr Kulvant

“Being able to visualise the cervix is an achievement for me “ Dr kate Helingoe House Officer on attachment in community

“Educating about the importance of regular smears which motivates them to come back “ Venet Nurse

Team members: Rekha Singh

Kulvant Singh, Venet Gonsalves

David Lim, Kate Hellingoe Ranjini

Ram /Med students

The Team

Organisational “Buy - In”

Aim: To have above 80% of cervical screening of total enrolled population.

Buy-in

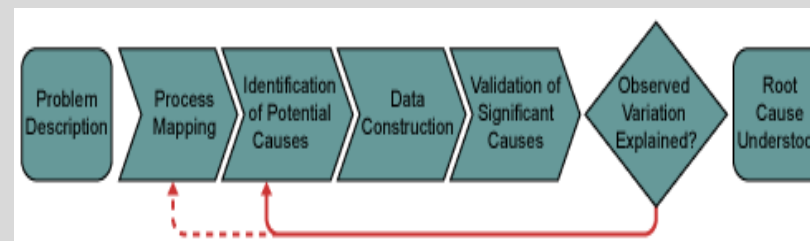

The only screening that we were not achieving good results was cervical screening so in the staff meeting it was decided that as the present recall system was not working. All staff were going to work as a team to try to achieve better results. Any staff who saw a patient eligible to have smear would encourage them, but in a non invasive discreet friendly manner. We would try to establish what were the barriers and endeavour to help in any way we could.

Change Ideas

Driver Diagram Teamwork and Creativity Help to Identify Root Causes

Creativity and team management tools, often employed in solution finding, can also generate deep understanding of the process mechanics and help the team prepare for the distilling and data-based validation of the root causes of a problem.(why women were not coming for smears)

Figure 1: Process of Root Cause Analysis

What Changes have you tested?

	Change Tested	Outcome
1	Txt recalls Letters to remind about smears due.	Minimal response
2	Phone calls with explanation why smears are important	Better response
3	Preparing clients for smear as a team during nurse triage and Doctor consultant /identifying their fears and offering support	Best response / high success rate

Most Successful PDSA Cycles?

Plan —We decided that we would work as a team (reception/nurse/Doctor / student /house officer)

And each member would try different methods and see which method worked best

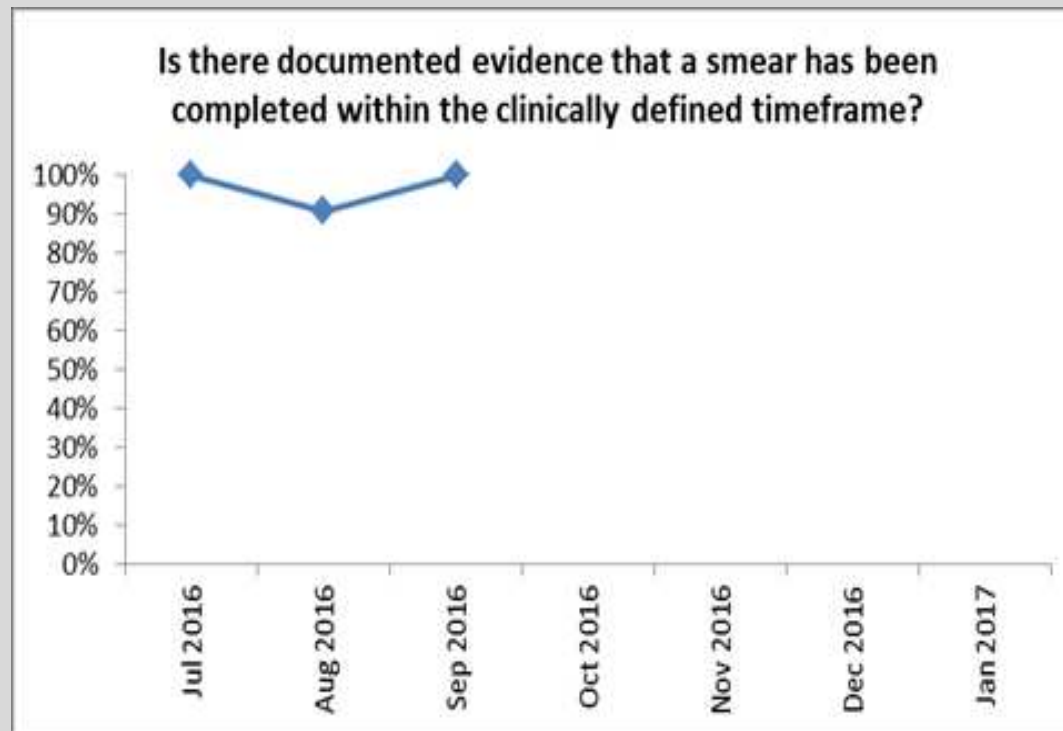

DO All the eligible data for women who required smear was download from pms – all no (responders were reactivated and each person interviewed for reasons why they refused smear /no longer required / not sexually active etc . All methods of recall system trialed from traditional recall to phone calls as well as nurse triage with opportunistic smears . Active promotion by GP/reception / and medical students .

Study All methods of recall systems were audited to see which method worked best
It was found there were different reasons for different age groups from bad personal experience (pain) shame / fear / cost /sexually inactive / hysterectomy / no-time

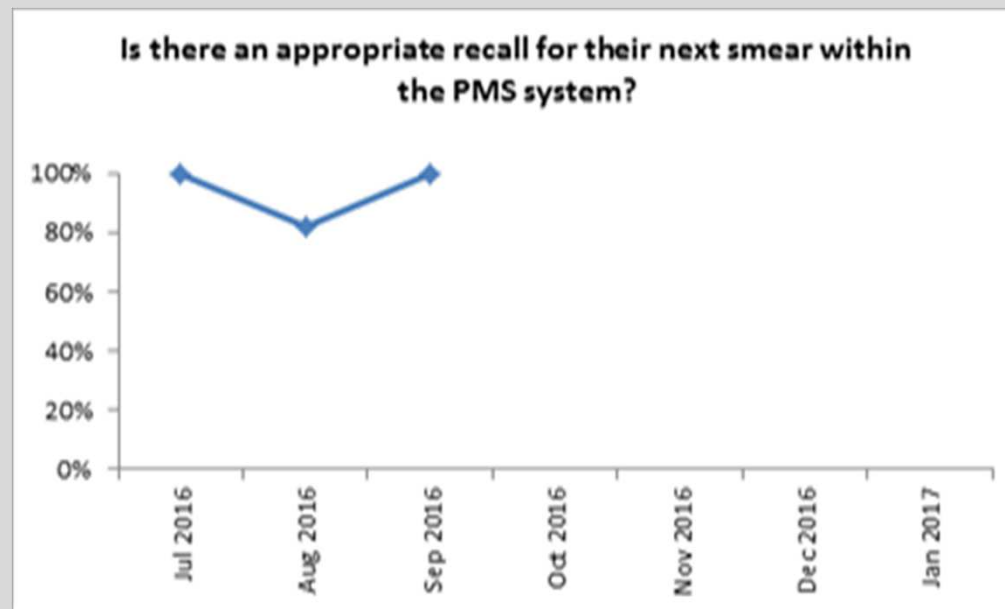

ACT It was decided that if any eligible woman had not responded with three recalls a senior nurse /Doctor would have a phone or face to face consult to establish why she was not responding.

Measures Summary

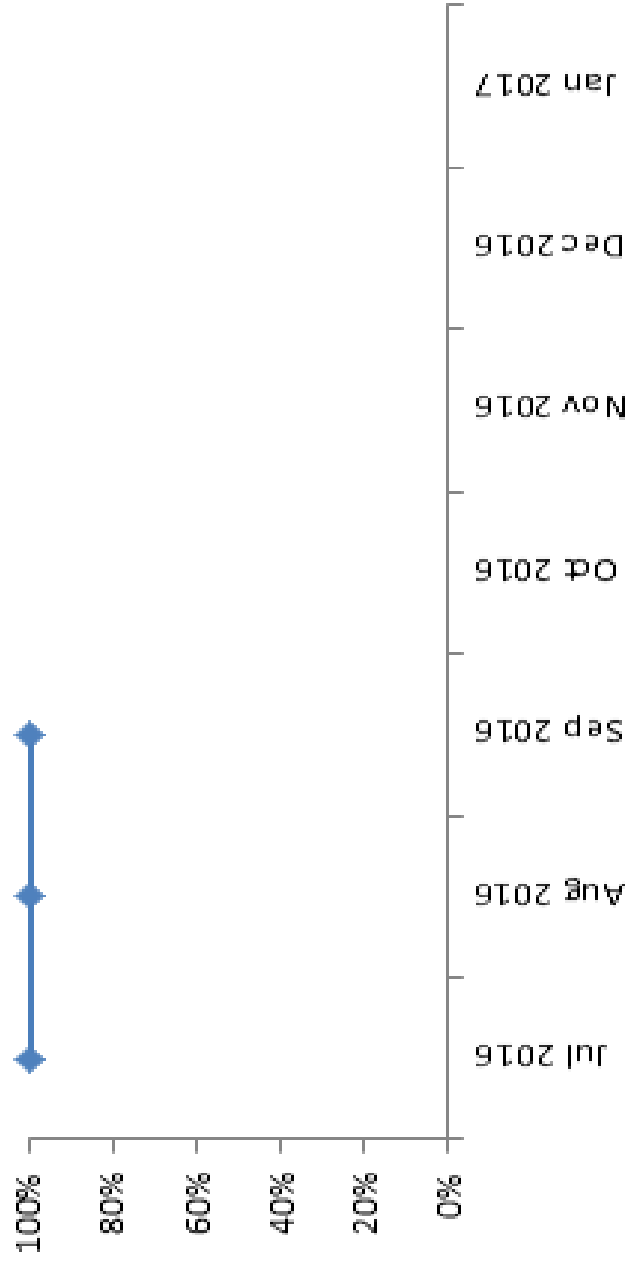

Briefly describe what you are measuring and how and why? Include Dashboard

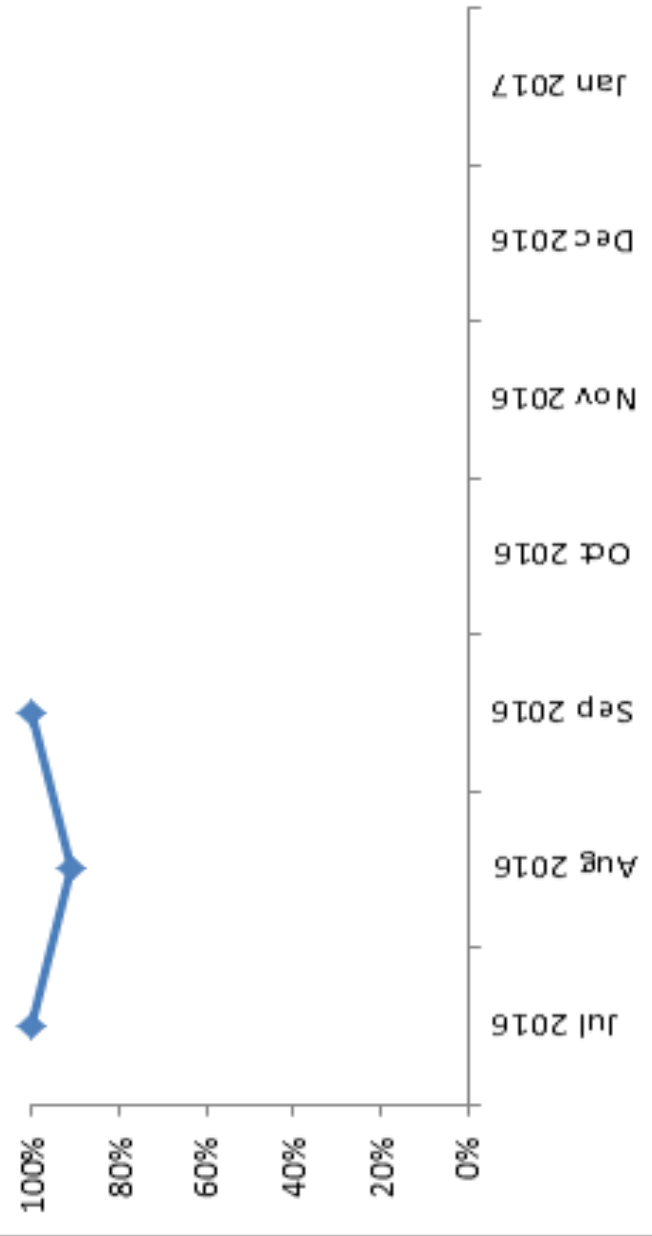

Continued

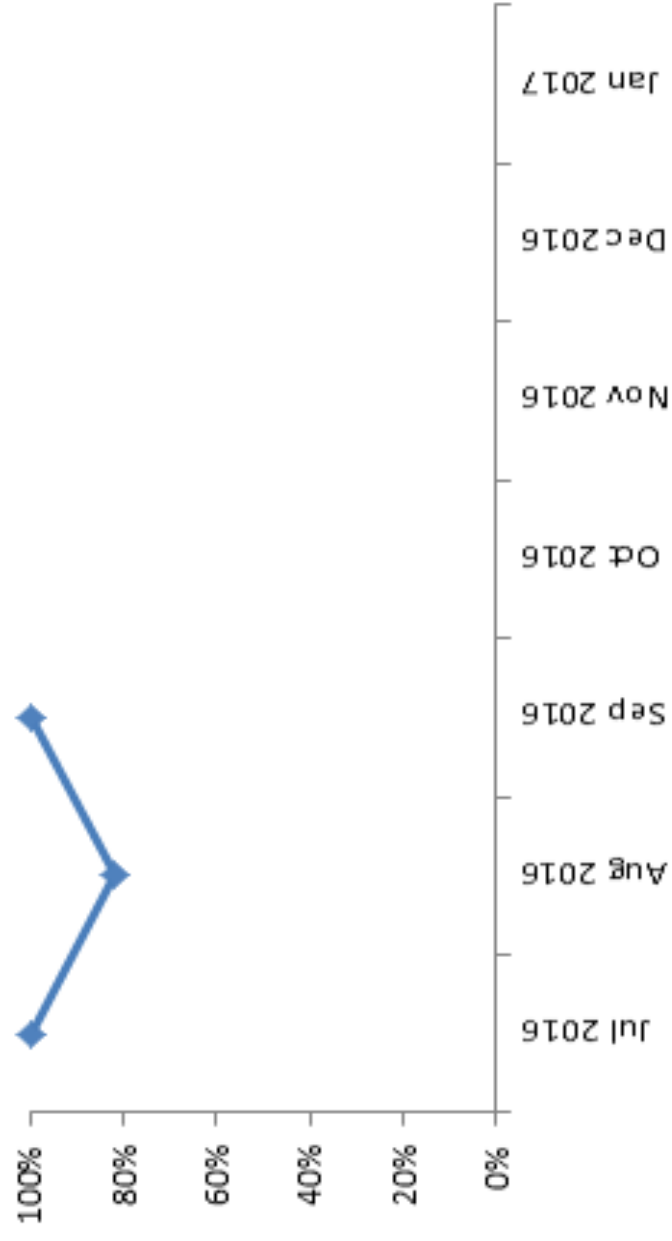

A clear clinical reason why a smear is not required documented (if applicable).

Is there documented evidence that the last smear result was conveyed to the patient with a clear follow up plan?

Cervical Smears Overall Compliance
