and Mona Lata

Organisational “Buy - In”

Aim:

Problem area – Average of only 46% of smear test done within timeframe.

Target – increase timeframe compliance rate to 60%.

Buy-in

1. Tracked all cases of timeframe non-compliant with positive high grade diagnosis and discussed with all staff of consequences.
2. Discussed and divided clear responsibilities for each staff.

Change Ideas

1. Set recalls to 2 weeks before the actual due date and ensure 2nd and 3rd recalls intervals of 1 week with prompts.
2. Affordability – credit facility, IOU? At discretion of PM and Doctor.
3. Opportunistic screening as patient walk in and also strategically.

What Changes have you tested?

| CX test done within timeframe | | | | | |
|-------------------------------|------------------|----------------|----------|------|--------------|
| Month | % w.i. timeframe | Total Increase | Recalled | Opp. | Credit Given |
| Jul | 40% | NA | 70% | 30% | 56% |
| Aug | 50% | 10% | 50% | 50% | 62% |
| Sep | 50% | 0% | 80% | 10% | 44% |

Cx within timeframe compliance rate increased by 10% since start of programme.

| | Changes Tested | Outcome |
|---|--|--|
| 1 | Recalls – set recalls to 2 weeks before due date. | <p><i>Outcome</i> – Ave. of 67% of cx tests in the past 3 months were of recalled patients.</p> <p><i>Next Phase</i> – to start 2nd and 3rd follow up recalls, prompt intervals of 1 week and to start measure stats in Jan.</p> |
| 2 | Opportunistic Screening - receptionist to scan patient's profile as they're queued on PMS, and other staff as they treat patients. | <p><i>Outcome</i> – Ave. of 40% cx tests were done opportunistically in last 3 months.</p> <p><i>Next Phase</i> - to strategically increase opportunistic screening by adding "Check cx due date" onto Chronic Disease Management Plan checklist.</p> |
| 3 | Credit Facility - Credit facility given to patients at discretionary of Practice Manager. | <p><i>Outcome</i> – Ave. of 54% of cx tests done with credit facility given!</p> <p><i>Next Phase</i> – to survey how much notice patient needs on average to save up for cost of cx test.</p> |

Most Successful PDSA Cycles?

Plan

- Set recalls to 2 weeks before actual due date and prompt nurses to do recalls every 2 weeks.

Do

- Follow up on task done or not with nurses and review recall list on PMS.

Study

- Ave. of **67%** of cx tests in the past 3 months were of **recalled** patients.

Act

- Continue with Recall cycle but for nurses to do 2nd and 3rd recall if no response from patient within 1 week. Prompts on PMS and by Practice Assistant.

Measures Summary

Highlights and Lowlights

Highlights

- Nurses appreciate the auto prompts and weekly reminder to do recalls.
- We've adapted a few other measurements that we are interested in such as how credit facility can impact our cx timeframe compliance rate and analyse the correlation/causality relationship of the stats.
- Out of curiosity, we compared with Jul-Sep previous year stats, timeframe compliance rate increased by 13%! (according to PMS QB)
- Staff feedback that just by being enrolled in this programme it has increased their awareness which in turns prompts them to check patients opportunistically.

Lowlights

- Getting used to some responsible shifting between staff.

Achievements to date

Do you have an

- agreed aim = Yes
- a change package = Beta phase
- measurement plan = Yes

Do people on your team know what their responsibilities are and what is expected of them? – Yes

What has changed and what difference have the changes made? - this question is basically the same question as slide 4!!

Any other achievements?

Act

- Continue with Recall cycle but for nurses to do 2nd and 3rd recall if no response from patient within 1 week. Prompts on PMS and by Practice Assistant.

Measures Summary

Is there documented evidence that a smear has been completed within the clinically defined timeframe?

Is there an appropriate recall for their next smear within the PMS system?

A clear clinical reason why a smear is not required documented (if applicable).

Is there documented evidence that the last smear result was conveyed to the patient with a clear follow up plan?

A clear clinical reason why a smear is not required documented (if applicable).

Is there documented evidence that the last smear result was conveyed to the patient with a clear follow up plan?

Cervical Smears Overall Compliance

Highlights and Lowlights

Highlights

- Nurses appreciate the auto prompts and weekly reminder to do recalls.
- We've adapted a few other measurements that we are interested in such as how credit facility can impact our cx timeframe compliance rate and analyse the correlation/causality relationship of the stats.
- Out of curiosity, we compared with Jul-Sep previous year stats, timeframe compliance rate increased by 13%! (according to PMS QB)
- Staff feedback that just by being enrolled in this programme it has increased their awareness which in turns prompts them to check patients opportunistically.

Lowlights

- Getting used to some responsible shifting between staff.

Achievements to date

Do you have an

- agreed aim = Yes
- a change package = Beta phase
- measurement plan = Yes

Do people on your team know what their responsibilities are and what is expected of them? – Yes

What has changed and what difference have the changes made? - this question is basically the same question as slide 4!!

Any other achievements?

See Slide 7

Otahuhu Family Medical Centre

PHO and Facilitator: Alliance
Health +, Kim Letford

Team members: Zeera Ahmad
and Mona Lata

Organisational “Buy - In”

Aim:

Problem area – Average of only 46% of smear test done within timeframe.

Target – increase timeframe compliance rate to 60%.

Buy-in

1. Tracked all cases of timeframe non-compliant with positive high grade diagnosis and discussed with all staff of consequences.
2. Discussed and divided clear responsibilities for each staff.

Change Ideas

1. Set recalls to 2 weeks before the actual due date and ensure 2nd and 3rd recalls intervals of 1 week with prompts.
2. Affordability – credit facility, IOU? At discretion of PM and Doctor.
3. Opportunistic screening as patient walk in and also strategically.

What Changes have you tested?

| CX test done within timeframe | | | | | |
|-------------------------------|------------------|----------------|----------|------|--------------|
| Month | % w.i. timeframe | Total Increase | Recalled | Opp. | Credit Given |
| Jul | 40% | NA | 70% | 30% | 56% |
| Aug | 50% | 10% | 50% | 50% | 62% |
| Sep | 50% | 0% | 80% | 10% | 44% |

Cx within timeframe compliance rate increased by 10% since start of programme.

| | Changes Tested | Outcome |
|---|--|--|
| 1 | Recalls – set recalls to 2 weeks before due date. | <p><i>Outcome</i> – Ave. of 67% of cx tests in the past 3 months were of recalled patients.</p> <p><i>Next Phase</i> – to start 2nd and 3rd follow up recalls, prompt intervals of 1 week and to start measure stats in Jan.</p> |
| 2 | Opportunistic Screening - receptionist to scan patient's profile as they're queued on PMS, and other staff as they treat patients. | <p><i>Outcome</i> – Ave. of 40% cx tests were done opportunistically in last 3 months.</p> <p><i>Next Phase</i> - to strategically increase opportunistic screening by adding "Check cx due date" onto Chronic Disease Management Plan checklist.</p> |
| 3 | Credit Facility - Credit facility given to patients at discretionary of Practice Manager. | <p><i>Outcome</i> – Ave. of 54% of cx tests done with credit facility given!</p> <p><i>Next Phase</i> – to survey how much notice patient needs on average to save up for cost of cx test.</p> |

Most Successful PDSA Cycles?

Plan

- Set recalls to 2 weeks before actual due date and prompt nurses to do recalls every 2 weeks.

Do

- Follow up on task done or not with nurses and review recall list on PMS.

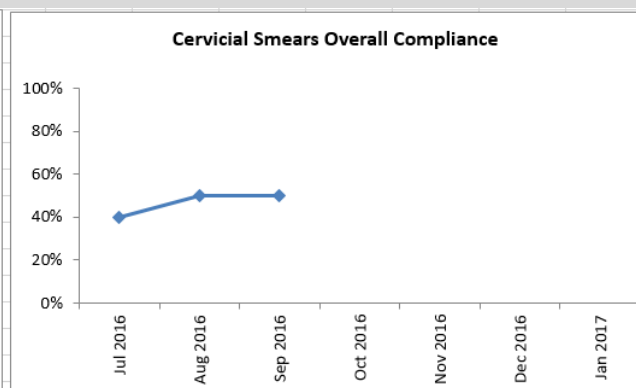

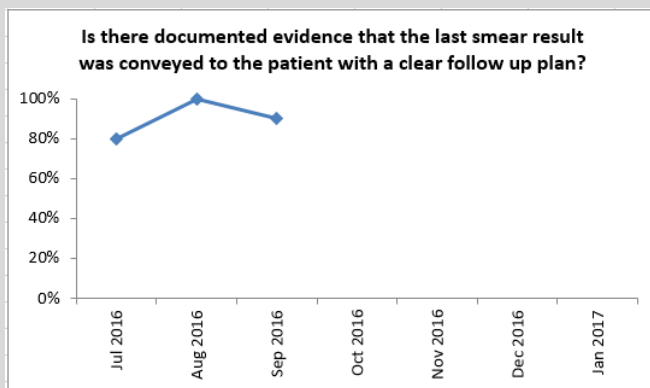

Study

- Ave. of **67%** of cx tests in the past 3 months were of **recalled** patients.

Act

- Continue with Recall cycle but for nurses to do 2nd and 3rd recall if no response from patient within 1 week. Prompts on PMS and by Practice Assistant.

Measures Summary

Is there documented evidence that a smear has been completed within the clinically defined timeframe?

Is there an appropriate recall for their next smear within the PMS system?

A clear clinical reason why a smear is not required documented (if applicable).

Is there documented evidence that the last smear result was conveyed to the patient with a clear follow up plan?
